DETAILED ACTION

Allowable Subject Matter

The following is an examiner's statement of reasons for allowance: The prior art fails to disclose a scanning circuit having, inter alia, biasing means for setting, when the switch is open, the output of the differential amplifier so that a current path through the power amplifier between the deflection coil and the first terminal is substantially eliminated (claim 1) or at least one biasing component that sets an output of the differential amplifier to a determined voltage such that a current path through the power amplifier is substantially eliminated, the output of the differential amplifier being set to the determined voltage in response to a voltage of the first supply terminal reaching a threshold (claim 7). The remaining claims 2-6 and 8-20 are allowed by virtue of their dependencies on the independent claims. Hence, the examiner has allowed claims 1 through 20.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
